

I believe every one has the right to offer what ever services they want in regards to radio broadcast as long as it isnt racial or slander. What is wrong with satellite companys offering Local services? Is the NAB afraid of a little competition. Isnt that what the country is based on, free enterprise and the right to compete. All companies deserve a right to offer a better product. If the NAB cannot compete then they need to make what they are offering better. If a better product is available and consumers want it then they should at least have the chance to have the service. Freedom of speech is our first amendment right, would it be fair to say we can no longer drink Pepsi because it competes with Coca Cola? No because we have free enterprise. thats what XM radio is doing expressing their right to free enterprise and bring "THEIR" consumers what they want., Local NEWS and Weather.
